The global Round Block Hole Type Graphite Double Effect Heat Exchanger market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The circular block hole type graphite double-effect heat exchanger is a highly efficient heat exchange equipment. It is made of graphite material and has the characteristics of double-effect heat exchange. The main part of the heat exchanger is composed of multiple round hole graphite modules. There are many small holes inside the graphite module, forming a complex flow channel, which can achieve efficient heat and mass transfer. The circular block hole type graphite double-effect heat exchanger can perform traditional convective heat transfer, as well as mass transfer heat transfer between gas-liquid, gas-gas, and liquid-liquid. At the same time, this heat exchanger also has the advantages of corrosion resistance, high temperature resistance, pressure resistance, etc., and is suitable for various industrial fields, such as chemical industry, petroleum, pharmaceuticals, food, metallurgy, etc.
