According to our (Global Info Research) latest study, the global Routine Road Maintenance market size was valued at US\$ 57827 million in 2025 and is forecast to a readjusted size of US\$ 71639 million by 2032 with a CAGR of 3.1% during review period.

Routine road maintenance refers to the regular, ongoing activities necessary to keep roadways in good condition and ensure their safety and usability for the public. These activities are typically planned and executed on a frequent and consistent basis, aiming to prevent deterioration and address minor issues before they become major problems.

The demand for routine road maintenance is driven by multiple factors, including the increasing wear and tear on road surfaces due to continuously growing traffic volume, the rising risk of infrastructure damage due to frequent extreme weather events, the public's increasing demands for driving safety and comfort, the government's growing emphasis on the full life-cycle management of road assets, and advancements in smart transportation and preventative maintenance technologies. As aging road networks enter their concentrated aging phase, timely minor repairs and maintenance can significantly delay the cycle of major and medium-sized repairs and reduce the pressure on fiscal expenditures. At the same time, refined urban management and the rural revitalization strategy are also promoting the upgrading of urban and rural road maintenance, accelerating the development of routine maintenance towards normalization, professionalization, and intelligence.
