The global ROV (Remotely Operated Vehicle) Survey Service market size is expected to reach \$ 536 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

ROV (Remotely Operated Vehicle) surveying services refer to operations that utilize unmanned remotely operated vehicles equipped with sonar, cameras, sensors, and other specialized equipment to conduct high-precision detection, inspection, and data acquisition of underwater environments, structures, or targets. This service involves remotely controlling the ROV through a surface control unit, enabling it to perform tasks in deep water, high-risk areas, or waters inaccessible to personnel, acquiring real-time high-definition images, 3D topography, physical parameters, and structural integrity data. Its core value lies in providing crucial decision-making support for marine resource development, engineering construction, scientific research, and accident investigation in a safer, more economical, and efficient manner.

Driven by the 'blue economy' and marine resource development strategies, the ROV surveying service market is experiencing rapid growth. Its prospects are closely linked to the needs of offshore wind power, oil and gas exploration, submarine communications, and national defense security. Technologically, intelligent ROVs integrating artificial intelligence, multi-sensor fusion, and autonomous navigation will become mainstream, significantly improving surveying efficiency and data analysis depth. Service models are also evolving from single-project-oriented to data-driven, full-lifecycle asset management. With decreasing operating costs and expanding application scenarios, this service will continue to upgrade as a key infrastructure for the digitalization and intelligentization of the marine industry.
