Abstracts

According to our (Global Info Research) latest study, the global RPA Robotic Process Automation Platform market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The RPA robotic process automation platform is a software system that can simulate human operations and automatically perform some rule-based, repetitive, and low-value office tasks, thereby improving work efficiency and quality, saving labor costs, and enhancing corporate competitiveness. . RPA platforms usually include the following components: Development: An interface for creating, editing, and testing automation scripts, usually providing graphical drag-and-drop functionality so that non-technical personnel can easily build automated processes. Run: A software robot used to execute automated scripts, usually running in the background or foreground, interacting with existing user systems to complete expected tasks. Control: A central console used to deploy, monitor and manage automation projects. It usually provides logs, reports, security, scheduling and other functions, allowing administrators to understand the status and effects of automation in real time.The advantages of the RPA platform are: Less coding work: RPA does not require complex programming and only requires simple configuration and drag-and-drop to create automated processes. Quick cost savings: RPA can replace manual labor to complete a large amount of repetitive work, thereby saving time and labor costs, improving productivity and return on investment. Improve customer satisfaction: RPA can provide round-the-clock service, reduce customer waiting time, and improve customer experience and satisfaction. Improve employee morale: RPA can free employees from tedious work and focus on more valuable and creative work, thereby improving employee happiness and job satisfaction. Higher accuracy and compliance: RPA can follow preset rules and processes to reduce

human errors and omissions, especially for work that requires high accuracy and compliance, such as finance, auditing, regulations, etc. Existing systems remain unchanged: RPA does not require any modifications to existing systems and only requires interaction on the presentation layer, so it is compatible with various applications and platforms without additional integration costs.
