According to our (Global Info Research) latest study, the global RPB Raman Probe market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. The RPB Raman Probe is a laboratory device for Raman spectroscopy. Raman spectroscopy is an analytical technique that can obtain information about the structure, chemical composition, and molecular vibrations of a sample by measuring light scattering in the sample. RPB Raman probes can be used for non-destructive Raman spectroscopy analysis of different types of samples, including solid, liquid and gas samples. It is widely used in chemistry, biology, materials science and other fields, and can provide information about the structure, composition and reaction kinetics of samples.
