The global RPP Geomembrane market size is expected to reach \$ 562.5 million by 2029, rising at a market growth of 3.7% CAGR during the forecast period (2023-2029).

Reinforced Polypropylene (RPP) geomembranes are polyester reinforced liners for long term water containment and industrial waste applications. It's made from a UV-stabilized polypropylene copolymer that gives the material flexibility, stability and chemical resistance. RPP geomembranes are perfect for applications where folds appear due to uneven and inconsistent weather conditions. It is supported with nylon scrim to ensure it remains strong and durable. This geomembrane type is typically used in municipal applications, aqua and horticulture, evaporation pond liners and mine tailings.
