According to our (Global Info Research) latest study, the global RS-485 Interface market size was valued at US$ 161 million in 2025 and is forecast to a readjusted size of US$ 174 million by 2032 with a CAGR of 1.1% during review period.

RS485 transceiver ICs, also known as RS485 interface ICs, are integrated circuits designed to facilitate communication using the RS485 protocol. RS485 is a widely used standard for serial communication in industrial applications because of its robustness and balanced differential signals.

RS485 transceiver ICs provide the necessary interface between the microcontroller or host system and the RS485 network. They convert the logic level signals of the microcontroller into the appropriate voltage levels required for RS485 communication. Additionally, these ICs handle tasks such as transmitting and receiving data, managing bus arbitration, and providing protection features.
