## Abstracts

According to our (Global Info Research) latest study, the global RS Flip-flop market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The RS flip-flop is a basic digital circuit element used to store and transmit binary data. It consists of two complementary feedback loops that enable storage and transfer of state.

The RS flip-flop is usually composed of two input terminals R (Reset) and S (Set), and two output terminals Q and Q'. When the input signal changes, the output state will change accordingly according to the logic rules. RS flip-flops can be used to implement a variety of synchronous and asynchronous circuits and are the building blocks of other, more complex flip-flops and memory elements.
