Abstracts

The global RS Flip-flop market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The RS flip-flop is usually composed of two input terminals R (Reset) and S (Set), and two output terminals Q and Q'. When the input signal changes, the output state will change accordingly according to the logic rules. RS flip-flops can be used to implement a variety of synchronous and asynchronous circuits and are the building blocks of other, more complex flip-flops and memory elements.

The RS flip-flop is a basic digital circuit element used to store and transmit binary data. It consists of two complementary feedback loops that enable storage and transfer of state.
