Abstracts

According to our (Global Info Research) latest study, the global RT Base (4-ADPA) market size was valued at US\$ 420 million in 2025 and is forecast to a readjusted size of US\$ 529 million by 2032 with a CAGR of 3.4% during review period.

In 2025, global 4-ADPA production reached approximately 163 k tons, with an average global market price of around US\$2,500 per ton. RT base, chemical name 4-aminodiphenylamine, also known as p-aminodiphenylamine, is a diphenylamine with an additional amine substituent. This dimer of aniline has various industrial uses, including as a hair dye ingredient, but also has raised concerns about toxicity by skin contact. It is also a starting material for the synthesis of 6PPD, an antiozonant for various rubber products.

The global RT Base (4-ADPA) market reflects a high degree of production concentration. As a key intermediate for PPD rubber antioxidants, over 90% of global consumption is tied to the rubber chemicals sector, making demand closely linked to the global tire and automotive industries. China dominates global production, with capacity concentrated among scaled producers with advanced process capabilities. Cost control and environmental compliance have become core competitive indicators. The industry is accelerating toward low-carbon processes, with leading producers adopting clean technologies such as continuous catalytic hydrogenation to reduce or eliminate wastewater discharge. Technology breakthroughs in desalination have further lowered production costs and waste treatment burdens. While downstream rubber antioxidant demand growth has moderated, the industry's shift toward specialized and customized products is creating steady demand for high-quality RT Base. The market has moved from rapid expansion into a stabilization phase focused on efficiency improvement and

structural optimization. Technological innovation and green manufacturing capabilities will increasingly determine competitive positioning.
