Abstracts

According to our (Global Info Research) latest study, the global Rubber Accelerator MTT market size was valued at US\$ 110 million in 2025 and is forecast to a readjusted size of US\$ 144 million by 2032 with a CAGR of 3.9% during review period.

Rubber Accelerator MTT is a highly efficient thiazole-based rubber vulcanization accelerator, primarily used in chloroprene rubber (CR). It can replace toxic thiourea-based accelerators like ETU, significantly improving the scorch resistance of the rubber compound while maintaining good physical properties.

The core upstream raw materials are N-methylethanolamine, carbon disulfide (CS₂), and some auxiliary acid and base catalysts. Global sales are projected to be approximately 10,200 tons in 2025, with an average market price of around US\$10,509 per ton. The industry's gross profit margin is in the range of 15%-30%.

MTT, a high-performance heterocyclic accelerator for rubber vulcanization, is gradually becoming an indispensable core additive in the field of specialty rubber processing, especially in chloroprene rubber (CR) and polyacrylate rubber (ACM) systems. Compared to the traditional accelerator NA-22 (ethylene thiourea), MTT provides excellent vulcanization rates while significantly improving the processing safety of the rubber compound and the physical and mechanical properties of the finished product. Its non-carcinogenic and environmentally friendly characteristics make it highly valuable as a replacement in the demanding European, American, and Chinese high-end manufacturing markets where occupational health requirements are stringent.
