Abstracts

According to our (Global Info Research) latest study, the global Rubber Antioxidant IPPD market size was valued at US\$ 167 million in 2025 and is forecast to a readjusted size of US\$ 215 million by 2032 with a CAGR of 4.0% during review period.

Global sales of Rubber Antioxidant IPPD was about 32040 tons in 2024 with average price of 5020 USD/ton. Rubber Antioxidant IPPD belongs to PPDs antioxidants. In the PPDs family, 6PPD is the most common one. The average gross margin of the industry ranges from 15%-20%.

Rubber Antioxidant IPPD is an amine-type rubber antidegradant, chemically N-isopropyl-N'-phenyl-p-phenylenediamine. It is used mainly as an antioxidant and antiozonant in vulcanized rubber to slow degradation caused by oxygen, ozone, heat, and dynamic flexing, helping reduce cracking (especially ozone/flex cracking) and extending service life.

Market drivers: As a classic amine antidegradant, Rubber Antioxidant IPPD provides antioxidant protection together with strong antiozonant/anti-flex-cracking performance, keeping it relevant in tires, hoses/belts, vibration-control parts, and seals where dynamic fatigue + heat/oxygen + ozone drive failure. Rising expectations for durability, shelf-life, and harsh-service performance (heat, speed, load, outdoor ozone exposure), plus ongoing replacement demand in tires and reliability upgrades in industrial rubber goods, continue to support consumption and formulation upgrades around Rubber Antioxidant IPPD-based protection systems.

Market challenges: Rubber Antioxidant IPPD is a staining, migratory amine

antidegradant, which can cause discoloration, blooming/transfer contamination, and compatibility issues with downstream bonding/painting?limiting its use in light-colored or appearance-sensitive products. Its dispersion and migration behavior are also highly dependent on polymer type, cure system, and processing window, leading to long qualification cycles. Feedstock/energy cost volatility and increasing environmental/compliance attention on amine / p-phenylenediamine chemistries further add uncertainty to cost control and market access.

Market trends: The direction is ?high protection with fewer side effects.? Formulators increasingly rely on synergistic blends (e.g., combining Rubber Antioxidant IPPD with hindered phenols, TMQ, and other antioxidants) to reduce total amine loading and mitigate migration-related risks while maintaining dynamic ozone resistance. On the product side, pre-dispersed masterbatches and low-dust, processing-friendly forms are gaining share. In parallel, the industry is actively developing lower-staining/low-migration, polymer-bound, or alternative antiozonant approaches to meet higher expectations on appearance, downstream process compatibility, and sustainability compliance?pushing Rubber Antioxidant IPPD from a purely commodity choice toward more application-specific, system-level solutions.
