Rubber coated magnets are a type of magnet with rubber material coated on the surface of the magnet, designed to enhance its abrasion resistance, corrosion resistance and grip. They are usually made of neodymium or ferrite magnets and are widely used in advertising, home decor, industry and toys. The rubberized coating not only provides extra protection against scratches and damage, but also increases safety during use by avoiding direct contact with metal surfaces. Thanks to their soft coating, these magnets can be easily attached to a variety of surfaces, adapting to a wide range of application scenarios and providing greater flexibility and convenience.
