According to our (Global Info Research) latest study, the global Rubber Gaskets and Seals market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Rubber belongs to the class of substances that are often termed as polymers. It has high molecular weight and is organic, consisting of repeating units of long-chain molecules on a backbone of carbon atoms. This is further processed into manufacturing mechanical spare parts such as rubber gaskets and seals. Rubber gaskets and seals are mechanical latex, which is used to fill the space between two or more mating surfaces to avoid leakage and wastage of gas and fluids.

Also, rubber gaskets and seals prevent contamination from external environmental conditions. Furthermore, they are vital machine components and widely utilized in diverse end-user applications, ranging from industrial machines, automobiles, food and beverage packing, and pharmaceutical in various forms such as ring, cork, O-rings, lip seal, and rotary seal used for closures and packaging. They are specially customized and designed depending on the type of coupling and end-user surface.
