Abstracts

Rubber Insulated Submarine Cables (RISC) are specialized underwater cables designed for transmitting electrical power or signals across bodies of water, such as oceans, rivers, or lakes. These cables are constructed with rubber insulation, which offers several advantages for underwater applications. RISC typically consists of multiple layers. The core of the cable contains conductors, usually made of copper or aluminum, which carry electrical power or signals. These conductors are insulated with rubber materials, such as ethylene propylene rubber (EPR) or synthetic rubber compounds, to provide electrical insulation and protection against water penetration.
