According to our (Global Info Research) latest study, the global Rubber Lagging Conveyor Roller market size was valued at US\$ 697 million in 2024 and is forecast to a readjusted size of USD 867 million by 2031 with a CAGR of 3.6% during review period.

The rubber lagging conveyor roller is a core driving component for bulk material handling systems, featuring steel roller cores covered with high-wear-resistant rubber through special vulcanization processes to form durable bonding layers that significantly improve friction coefficients and impact resistance between conveyor belts and rollers. The product offers excellent anti-slip and noise reduction properties, with various rubber compound options available to meet different operational requirements including oil-resistant, high-temperature-resistant, and anti-static types. Precision dynamic balance design and anti-corrosion treatment ensure long-term stable operation under heavy loads, humid or corrosive environments, effectively extending the service life of conveying systems.
