## Abstracts

According to our (Global Info Research) latest study, the global Rubber and Plastic Insulation Material market size was valued at US\$ 2658 million in 2025 and is forecast to a readjusted size of US\$ 3844 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global production of rubber and plastic insulation materials reached 587 million square meters, with an average selling price of US\$4.4 per square meter. Rubber and plastic insulation materials refer to closed-cell flexible foamed insulation materials represented by NBR/PVC, NBR, EPDM, and some polyolefins/PE. They are mainly used in the form of pipe shells, sheets, rolls, and irregularly shaped parts in HVAC, refrigeration and cold chain, building electromechanical, industrial equipment, shipbuilding and marine engineering, rail transit, and some data center scenarios. Their core advantages are low thermal conductivity, strong anti-condensation ability, good construction flexibility, corrosion resistance, and a certain degree of sound insulation performance. The upstream mainly includes rubber, PVC, EPDM, polyolefin resins, flame retardants, foaming agents, and covering materials; the midstream involves compounding, foaming, and processing; and the downstream primarily serves building energy conservation and industrial insulation systems. Gross profit margins range from approximately 20% to 35%.
