Abstracts

Silicone Mould Release Agent is a type of release agent (also mold release agent, release coating, or mold release coating) is a chemical used to prevent other materials from bonding to surfaces. The surface tension of silicone is low and it spreads easily, so it provides good wetting of fine, irregular surfaces. It is chemically inactive and can be used with almost all molding materials. Silicone has excellent heat and cold resistance and offers good performance over a wide temperature range. These characteristics are why silicone is used as a mold-release agent in a range of industries including the rubber industry, resin industry, food processing industry, and die casting.
