According to our (Global Info Research) latest study, the global Rubber Wear Parts for Mining market size was valued at US\$ 1011 million in 2025 and is forecast to a readjusted size of US\$ 1407 million by 2032 with a CAGR of 4.9% during review period.

Rubber wear parts for mining are rubber components used in mining operations such as crushing, screening, conveying and mineral processing to resist abrasion, impact and corrosive environments while extending equipment service life. Typical products include conveyor belts, rubber liners, buffer pads, hose sheaths, cable sheaths, seals, bucket liners, pump rubber parts and composite rubber overlays. These parts are manufactured from natural rubber, styrene-butadiene rubber (SBR), neoprene or rubber compounds modified with wear-resistant fillers, and are produced by vulcanization and, where required, bonded to fabrics or metal backing plates. They improve uptime, reduce lifecycle costs, and are often sold with technical support and warranty services. They are designed for easy installation, field repairability, and compatibility with OEM equipment.

Gross profit margin: The Rubber Wear Parts for Mining industry has a gross profit margin of approximately 30%-50%.

Cost structure: Raw materials account for 40%-65%, while processing/manufacturing costs (mixing, calendaring/compounding, hot press vulcanization, cutting, machining/stitching) account for 15%-30%.

Industry chain: Upstream (raw materials and key intermediates) include suppliers of natural and synthetic rubber, fillers, steel cord, adhesives, vulcanizing agents, and

additives; downstream includes mining companies (approximately 75%), mining equipment manufacturers (14%), and others (distributors and third-party service providers).
