According to our (Global Info Research) latest study, the global Rubella Recombinant Antigen market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Rubella Recombinant Antigen is a protein produced by genetic engineering technology that mimics the natural antigen of the rubella virus. Rubella virus is the virus that causes rubella, a common infectious disease that is particularly dangerous in pregnant women because infection may lead to congenital rubella syndrome in the fetus. Recombinant antigens are used in in vitro diagnostic reagents to detect immune responses caused by rubella infection (such as the presence of antibodies), and are used in vaccine development and basic research.
