According to our (Global Info Research) latest study, the global Robotics in Laparoscopic Surgery market size was valued at USD 1038.3 million in 2023 and is forecast to a readjusted size of USD 1458.7 million by 2030 with a CAGR of 5.0% during review period.

Laparoscopic surgery procedures have improved the medical care provided to patients by reducing complication rates, hospital stays, patient trauma and recovery time. With over 7.5 million laparoscopic procedures performed annually worldwide, laparoscopic surgery is the fastest-growing discipline within the surgery market today.

Laparoscopic surgery relies on imaging using a laparoscope, which is a narrow, rigid tube that is connected to a small camera. The camera captures images from within the abdominal cavity, which are then projected onto a video monitor in the operating room. Guided by these images, surgeons manipulate surgical instruments that are inserted into patients through small incisions.
