According to our (Global Info Research) latest study, the global Runner Chucks market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A runner chuck is a chuck that grips the runner and removes the molded product from an injection molding machine. Molten resin, injected from the nozzle of an injection molding machine, is fed through a thick passage in the mold called a sprue, through a narrow passage called a runner, and finally through a place called a gate to the molding section.

Normally, a runner chuck is used to grip the runner and remove the molded product. However, it can also be used to chuck the molded product itself or the sprue.
