The global Runway Rubber Removal Solutions market size is expected to reach \$ 934 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Runway rubber removal solutions are specialized equipment and technical solutions designed to remove accumulated rubber residues from aircraft runways. During takeoff and landing, friction between aircraft tires and the runway causes rubber to gradually accumulate on the runway surface, leading to roughness and affecting aircraft braking performance and operational safety. Therefore, timely removal of rubber residues is crucial. Common runway rubber removal solutions include high-pressure water jet cleaning, mechanical scrubbing, heat treatment, and vacuuming systems. These devices typically use high-pressure water jets, specialized brushes, or other cleaning tools to physically remove rubber residues without damaging the runway surface structure. Rubber removal equipment is widely used in international airports and high-traffic aviation hubs to ensure runway smoothness and safety. Such solutions not only improve aircraft safety during takeoff and landing but also extend runway lifespan and reduce long-term maintenance costs. With the continuous development of airport facilities and the aviation industry, the demand for runway rubber removal equipment is increasing, making it an important part of modern airport routine maintenance.
