The global Runway Surface Cleaning Machine market size is expected to reach \$ 719 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

In 2025, global Runway Surface Cleaning Machine production reached approximately 1,714 units, with an average global market price of around USD 280,000 per unit.

The gross profit margin of major companies in the industry is between 20.35%-36.84%.

In 2025, the global production capacity of Runway Surface Cleaning Machine was approximately 2,256 units.

Runway Surface Cleaning Machine is specialized airport maintenance equipment used to remove rubber deposits, paint residues, oil, dust, debris and other contaminants from runway, taxiway and apron surfaces. It may use high-pressure water, vacuum recovery, brushing, shot blasting or combined cleaning methods to restore friction, visibility and operational safety. The product is used by airports, air bases, maintenance contractors and aviation infrastructure operators. The market includes self-propelled, truck-mounted and modular runway cleaning machines, but excludes ordinary street sweepers, snow removal equipment and manual cleaning tools.

The industry chain includes high-pressure pumps, nozzles, vacuum systems, brushes, water tanks, recovery tanks, chassis, hydraulic systems, sensors, control systems and wear-resistant parts. Midstream production covers mechanical design, pump integration, cleaning head assembly, recovery system design, chassis integration, safety testing, performance validation and commissioning. Downstream demand comes

from civil airports, military airfields, runway maintenance firms, aviation authorities and infrastructure operators. Growth is driven by flight safety, runway friction standards, airport expansion, maintenance cycles and higher aircraft traffic.
