The global Runway Turnoff Light market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Runway turnoff light is a lighting device installed on the edge or near the intersection of a runway and a taxiway or a high-speed exit point. It is used to guide aircraft during taxiing when turning off the runway onto a taxiway or exit. The runway turnoff light typically consists of a series of high-intensity lights that emit a steady or flashing light to indicate the designated turnoff point. These lights assist pilots in identifying the correct route for exiting the runway, enhancing safety and efficiency in aircraft movement and taxiing operations.
