Abstracts

According to our (Global Info Research) latest study, the global RV Battery Isolators market size was valued at US\$ 288 million in 2025 and is forecast to a readjusted size of US\$ 507 million by 2032 with a CAGR of 8.4% during review period.

In 2025, global RV Battery Isolator output reached about 7 million units and global capacity of around 8 million units. The average price is about USD 40 per unit, with gross margins near 34%. RV Battery Isolators are electrical power management devices designed to separate the starter battery from one or more auxiliary (house) batteries in recreational vehicles (RVs), camper vans, motorhomes, and overlanding vehicles while allowing both battery banks to be charged from a common charging source. Their primary function is to prevent the auxiliary battery from discharging the engine starting battery when the vehicle is parked, while ensuring automatic charging during engine operation or through external charging sources such as shore power, solar panels, or DC-DC chargers. RV battery isolators are available as diode-based isolators, solenoid/relay-based isolators, voltage-sensitive relays (VSRs), smart electronic isolators, and integrated DC-DC battery management systems, depending on the charging strategy and battery chemistry. The supply chain begins with raw materials and electronic components including copper busbars, aluminum heat sinks, semiconductors (MOSFETs, diodes, and power transistors), relays, microcontrollers, PCBs, connectors, and protective housings supplied by electronics and metal manufacturers. These components are assembled by battery isolator manufacturers and electrical power management specialists, followed by testing, certification, and integration into RV electrical systems by OEMs, upfitters, and aftermarket equipment suppliers. Finished products are distributed through RV manufacturers, marine and off-road equipment distributors, automotive electrical wholesalers, specialty retailers, and e-

commerce channels, serving applications in motorhomes, camper vans, travel trailers, fifth-wheel RVs, expedition vehicles, and other mobile off-grid power systems.
