Pump manufacturers have been working on developing more energy-efficient pumps that minimize power consumption.

An RV and marine diaphragm pump is a type of water pump specifically designed for use in recreational vehicles (RVs) and marine applications. It is commonly used to provide a reliable source of water for various purposes, such as supplying fresh water for drinking, washing, and showering while on board an RV or boat.

The pump gets its name from its operating mechanism, which involves a flexible diaphragm that moves back and forth to create suction and pressure. This diaphragm is typically made of durable materials like rubber or thermoplastic elastomer, allowing it to withstand the rigors of marine and RV environments.
