Abstracts

SaaS-based expense management includes the deployment of expense management systems as a web-based subscription service. This system helps in controlling and monitoring expense reports, thereby streamlining the business process and preventing fraud and human error. It also increases visibility across the entire reimbursement claim process, reducing travel costs and improving the efficiency of enterprises.

The SaaS-based system is operated by a third-party organization as opposed to the installation and maintenance of an on-site business system. SaaS-based expense management has succeeded in changing the procurement of expense management systems from a capital expenditure to a pay-per-use subscription arrangement.
