Abstracts

The global Sacrificial Anodes for Port Industrial market size is expected to reach \$ 661 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global Sacrificial Anodes for Port Industrial production reached approximately 13,457 k units?with an average global market price of around US\$ 35 per unit, and a gross profit margin of approximately 20%-40%. Sacrificial Anodes for Port Industrial are consumable galvanic-anode products installed on submerged or buried metallic structures in ports and harbours to prevent electrochemical corrosion. The anode is made from a metal alloy that is more electrochemically active than the protected steel, causing the anode to corrode preferentially and supply protective current without an external power source. Products mainly include aluminium-alloy and zinc-alloy anodes for seawater and brackish-water structures, with magnesium-alloy products used selectively in freshwater or higher-resistivity environments. Common forms include welded stand-off anodes, flush-mounted anodes, bolt-on anodes, plate anodes and anodes customized for steel piles, sheet-pile walls, jetties and harbour gates.

The industrial chain of Sacrificial Anodes for Port Industrial includes upstream primary aluminium, zinc and magnesium, alloying elements, steel inserts, welding materials, foundry sand, moulds, fluxes, testing instruments and lifting components. Midstream activities include alloy formulation, raw-material inspection, melting, casting, steel-core preparation, insert positioning, heat control, chemical-composition analysis, electrochemical-capacity testing, dimensional inspection, surface cleaning, marking, packaging and customized cathodic-protection design. Downstream applications include tubular steel piles, sheet-pile walls, quay structures, jetties, piers, dolphins, dock gates, seawater intake systems, harbour pipelines and other immersed steel assets. Related

services include corrosion surveys, protection-current calculations, anode layout design, installation, underwater inspection and replacement planning.
