Abstracts

According to our (Global Info Research) latest study, the global Sacrificial Mold Release Agent (SMRA) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Sacrificial mold release agents are applied in every molding cycle. The release agent film on the mold surface is in great part depleted after each molding cycle and needs to be replenished. Sacrificial mold release agents are generally non-functional, non-reactive coatings that create a physical barrier between the mold and material that is transferred to and removed with the molded part. Sacrificial release agents are designed for frequent application and generally offer limited releases per application.

At the onset of molding operations, sacrificial mold release agents were the only available category. Hence the reason they are often referred to as conventional release agents.
