## Abstracts

The global Sacrificial Mold Release Agent (SMRA) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sacrificial mold release agents are applied in every molding cycle. The release agent film on the mold surface is in great part depleted after each molding cycle and needs to be replenished. Sacrificial mold release agents are generally non-functional, non-reactive coatings that create a physical barrier between the mold and material that is transferred to and removed with the molded part. Sacrificial release agents are designed for frequent application and generally offer limited releases per application.

At the onset of molding operations, sacrificial mold release agents were the only available category. Hence the reason they are often referred to as conventional release agents.

This report studies the global Sacrificial Mold Release Agent (SMRA) production, demand, key manufacturers, and key regions.
