According to our (Global Info Research) latest study, the global Safety Cabinets market size was valued at US\$ 254 million in 2024 and is forecast to a readjusted size of USD 378 million by 2031 with a CAGR of 5.9% during review period.

A Biological Safety Cabinet (BSC), also known as a Biosafety Cabinet is mainly used for handling pathogenic biological samples or for applications that require a sterile work zone. A biological safety cabinet creates inflow and downflow of air that provides operator protection. The downflow air passes through an ULPA/HEPA filter and creates an ISO Class 3 work zone to protect samples from the risk of cross-contamination. The air exhausted also passes through an ULPA/HEPA filter prior to release to protect the environment. Class I biosafety cabinets cannot provide effective protection for operating objects. In this report, we focus on Class II A, Class II B and Class III type BSC.

Global key players of Safety Cabinets include Esco Micro, Thermo Fisher Scientific, Haier Biomedical, etc. The top three players hold a share over 35%. Asia-Pacific is the largest market, has a share about 47%, followed by Europe and North America, with share 22% and 26%, separately. In terms of product type, class II A type is the largest segment, occupied for a share of 81%.
