Abstracts

A safety instrumented system (SIS) is a system that contains control elements, sensors, and logic solvers to monitor parameters and values of processes within a plant and ensure that they remain within defined limits. In case those limits are violated, safety instrumented systems deploy a series of actions to take the process to a safe state.

Safety conditions in a plant must be clearly defined and must be followed closely by the employees. SIS ensures that in case the safety of certain processes is compromised, appropriate action is triggered to mitigate risk and make those processes safe again.
