Safety isolator switch is an electrical switch used to isolate a circuit from the power source. It is used to cut off the electrical power supply to a specific area or piece of equipment, making it safe for maintenance or repair work to be carried out. Safety isolator switches are commonly used in industrial and commercial settings, such as in manufacturing plants, data centers, and hospitals. They are also used in homes to disconnect or isolate power to appliances and other equipment. The switch is designed to be easily visible and accessible, with a positive means of switching on and off. The switch is normally wired so that when it is in the off position, all electrical power is disconnected from the circuit. Safety isolator switches are an important safety feature in electrical systems, reducing the risk of electrocution and fire caused by accidental contact with live wires. They are also a legal requirement in many countries for certain types of electrical installations.
