Abstracts

Safety mat controllers are used to send and receive signals within a hazardous industrial area to make sure that neither workers nor machinery are injured or damaged. Safety mat controllers are connected to either a single safety mat, or a series of them. These mats, in turn, are laid out in a matrix as a boundary around a machine or robot. When any pressure is applied to a mat, be it from foot traffic or vehicles, conductive plates in the mat touch and signal are sent to the controller via an output relay.

According to our (Global Info Research) latest study, the global Safety Mat Controller market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.
