According to our (Global Info Research) latest study, the global Safety Seats market size was valued at USD 5770 million in 2023 and is forecast to a readjusted size of USD 9550.7 million by 2030 with a CAGR of 7.5% during review period.

Safety seats, sometimes referred to as an infant safety seat, are seats designed specifically to protect children from injury or death during collisions. Car manufacturers may integrate child safety seats directly into their vehicle's design. Most commonly, these seats are purchased and installed by consumers.

Safety seats fit newborns and smaller infants best. They are used only as rear-facing seats (this means the baby faces the back of the car). Infant-only seats are for babies from birth until they reach around 35 pounds (about 16 kilograms), depending on the model. You'll need to use another seat when the baby outgrows the seat. Safety seats are convenient because they also can be used as carriers, chairs, or rockers when not used in the car. Many models hook into a base, and the base can stay in the car. Some can be clicked into strollers.

The Global Info Research report includes an overview of the development of the Safety Seats industry chain, the market status of OEM Market (Rearward-facing baby seat, Combination seat (Rearward and Forward-facing)), Automobile After Market (Rearward-facing baby seat, Combination seat (Rearward and Forward-facing)), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Safety Seats.
