According to our (Global Info Research) latest study, the global Safety Spray Shields market size was valued at USD 391 million in 2023 and is forecast to a readjusted size of USD 536.1 million by 2030 with a CAGR of 4.6% during review period.

Safety Spray Shields are used to prevent injury to personnel or damage to equipment in the event of a leak or spray-out of acids, caustics, chlorine, and other dangerous liquids at piping connections (such as flanges, valves, or expansion joints) found in chemical, pulp/paper, petrochemical and wastewater treatment plants.

These Safety Shields are commonly referred to as Pipe safety shields, flange guards, flange covers, flange diapers, or flange protectors.

Safety Spray Shields are designed to prevent and reduce catastrophic damage and injury to workers, property, and equipment by temporarily containing hazardous leaks and sprays. Early leak detection helps reduce maintenance costs in plants by preventing downtime from failures or recordable accidents. They help to minimise accidents on plant preventing costly plant down time, unplanned absenteeism, HSE investigations etc.
