Safety Winged Needle Sets are sterile, single-use medical devices designed for venipuncture procedures such as blood collection or intravenous access. They consist of a short, thin needle flanked by flexible plastic 'wings' that aid in precise placement and control during insertion. Attached to the needle is a length of flexible tubing that allows for connection to syringes or blood collection systems. A key feature of these sets is the integrated safety mechanism, which is activated after use to shield the needle and help prevent needlestick injuries. Safety winged needle sets are especially useful for accessing small or fragile veins, such as in pediatric or geriatric patients.
