The global Sailing Pants market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sailing pants, also known as sailing trousers or foul weather pants, are specialized garments designed for use in sailing and other water-based activities. These pants are constructed from durable, waterproof, and windproof materials to provide protection against the harsh elements encountered at sea. They are an essential part of a sailor's attire for ensuring comfort and safety in wet and windy conditions.

Sailing pants typically feature a high waist and adjustable waistbands to keep water out, as well as reinforced knees and seat areas for added durability. They may also have features such as sealed seams, waterproof zippers, and adjustable ankle cuffs to prevent water from entering. Sailing pants are designed to be worn over other clothing layers and are an integral part of foul weather gear worn by sailors to stay dry and warm while on deck.
