According to our (Global Info Research) latest study, the global Sailplanes market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Gliders were developed from the 1920s for recreational purposes. As pilots began to understand how to use rising air, gliders were developed with a high lift-to-drag ratio. These allowed longer glides to the next source of 'lift', and so increase their chances of flying long distances. This gave rise to the popular sport known as gliding although the term can also be used to refer to merely descending flight. Such gliders designed for soaring are sometimes called sailplanes.

The Global Info Research report includes an overview of the development of the Sailplanes industry chain, the market status of Transportation (Without Motor Sailplanes, With Motor Sailplanes), Lifting (Without Motor Sailplanes, With Motor Sailplanes), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Sailplanes.
