The global Salad Oil market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Salad oil can be eaten raw, and it is named after it is especially suitable for western 'salad' cold dishes. Salad oil is light yellow, clear, transparent, odorless, and has a good taste. When used for cooking, it does not foam and smoke less, and can maintain the original color and flavor of dishes. It can still remain clear and transparent when refrigerated at 0°C for 5.5 hours (Peanut salad oil except), in addition to being used as cooking and frying oil, it is mainly used as oil for cold meals, and can also be used as raw material oil for margarine, shortening, mayonnaise and various seasoning oils. The manufacturing process of salad oil is to generally select high-quality oil materials and process them into crude oil, and then go through degumming, deacidification, decolorization, deodorization, dewaxing, degreasing and other processes to become finished products. Packaging containers for salad oil should be dedicated, clean, dry and sealed, comply with food hygiene and safety requirements, and must not be mixed with other oils, non-edible oils and mineral oils.

Salad oil refers to high-grade edible vegetable oil refined from various vegetable crude oils through degumming, decolorization, deodorization (defatting) and other processing procedures. It is mainly used as raw material oil for cold dressing or sauce and seasoning. The salad oils sold in the market mainly include soybean salad oil, rapeseed salad oil, rice bran salad oil, cottonseed salad oil, sunflower seed salad oil and peanut salad oil.
