## Abstracts

According to our (Global Info Research) latest study, the global Salbutamol Inhalation market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The salbutamol inhalation market has been growing steadily in recent years due to the rising incidence of respiratory diseases such as asthma, chronic obstructive pulmonary disease (COPD), and bronchitis. Salbutamol inhalation is a bronchodilator medication that helps to relax the muscles in the airways, making it easier to breathe. It is widely used as a rescue medication for the treatment of acute asthma attacks and as a maintenance medication for the prevention of asthma symptoms. The increasing prevalence of respiratory diseases, coupled with the growing awareness of the benefits of early diagnosis and treatment, is driving the demand for salbutamol inhalation products. In addition, the rise in air pollution levels and the growing prevalence of smoking are also contributing to the growth of the salbutamol inhalation market. The market is also witnessing a trend towards the development of more effective and convenient inhalation devices, such as metered-dose inhalers, dry powder inhalers, and nebulizers. These devices offer greater convenience, ease of use, and improved drug delivery, which is driving their adoption in the market.

Salbutamol Inhalation comes as a spray or aerosol that is used to treat asthma and other respiratory conditions.
