According to our (Global Info Research) latest study, the global Salinometers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A salinometer is a machine that is capable of measuring the table salt (NaCl) content, known assalinity, of a solution. Another name for a salinometer is a conductivity meter, as dissolved salt in water will increase its ability to conduct electricity at measurable levels.

Salinity is measured indirectly by testing the electrical conductivity (EC) of the water. Saltwater conducts more electricity than water with no dissolved salt. Fresh water has almost no dissolved salt, whereas ocean water has a salinity in the range of around 34 to 36 parts per thousand (ppt).
