The Saliva Progesterone ELISA Test Kit is a kit that uses enzyme-linked immunosorbent assay technology and is specifically used to quantitatively detect the progesterone content in saliva. It has the characteristics of simple operation, high sensitivity and good specificity, and can complete the sample detection work in a short time. The advantage of this kit is that it does not require blood drawing, but only requires a small amount of saliva sample to accurately measure the progesterone level, which not only reduces the patient's pain, but also avoids the risk of cross-contamination that may be caused by blood samples. At the same time, its rapid and accurate characteristics provide great convenience for monitoring and diagnosis, and it is an ideal individualized detection tool.
