## Abstracts

The global Salt Bath Furnace Transformer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electrode salt bath furnace introduces low-voltage (5.5-36 volts) high-current alternating current into the furnace through metal electrodes, and the current flows through the salt solution to generate heat. The salt solution is not only a heating element, but also a medium for heating the workpiece. The temperature of the brine varies according to the composition of the brine, generally between 150 and 1300°C. The action of the magnetic field can make the salt liquid circulate and turn, which is beneficial to the uniform temperature of the salt liquid and can increase the heating speed of the workpiece.

This report studies the global Salt Bath Furnace Transformer production, demand, key manufacturers, and key regions.
