## Abstracts

According to our (Global Info Research) latest study, the global Salt Chlorine Generator for Swimming Pool market size was valued at USD 365.7 million in 2023 and is forecast to a readjusted size of USD 534 million by 2030 with a CAGR of 5.6% during review period.

A salt chlorine generator (also known as a salt system or a salt chlorinator) is a swimming pool chlorination system that creates chlorine from sodium chloride (salt).

As salt water travels through the swimming pool's circulation system, it enters the salt chlorine generator and passes through a salt cell. As the salt water flows through the cell, a low-voltage direct current is applied to flat, rectangular plates inside the cell, initiating electrolysis. Through electrolysis, salt and water break up into hydrogen gas and hypochlorous acid. The hydrogen gas simply leaves the swimming pool water in the form of small bubbles. The hypochlorous acid sanitizes the swimming pool water and ultimately reverts back into salt, and the process repeats.
