Salt fog test equipment, also known as salt spray test equipment or salt spray chambers, is a type of testing equipment used to simulate and evaluate the corrosion resistance of materials and coatings. It creates a controlled environment of salt fog or salt spray to subject the test samples to accelerated corrosion conditions.

Salt fog test equipment is commonly used in industries such as automotive, aerospace, marine, and coatings manufacturing to assess the durability and performance of materials, coatings, and finished products in corrosive environments. It helps manufacturers and researchers determine the effectiveness of corrosion protection measures and make informed decisions about material selection and design improvements.
