According to our (Global Info Research) latest study, the global Rotary Macerator market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The Rotary Macerator is an upgraded version of the Macerator. It is very efficient at macerating items when its RPM is high, but much less efficient than a regular Macerator at low RPM. RPM increases while macerating items or receiving a Redstone current, like with the other Advanced Machines. 7500 RPM is the maximum RPM without Overclocker Upgrades. RPM will quickly drop to 0 when it stops macerating and is not receiving a redstone signal.
