## Abstracts

According to our (Global Info Research) latest study, the global Sand 3D Printers market size was valued at US\$ 124 million in 2025 and is forecast to a readjusted size of US\$ 259 million by 2032 with a CAGR of 12.3% during review period.

Sand 3D printers typically refer to industrial equipment that uses additive manufacturing processes such as binder jetting to solidify sand particles layer by layer in a sand bed, directly generating the sand molds and cores required for casting from a CAD model. Compared to traditional molding, this type of equipment eliminates the need for wooden molds, metal molds, and core boxes, significantly shortening the mold development cycle and lowering the threshold for prototyping complex castings. Based on product form, they can be broadly categorized into heavy-duty large-format equipment for large-size, medium-batch castings, and small-to-medium-format systems for small-batch, multi-variety, and rapid prototyping.

In 2025, global Sand 3D Printer sales reached approximately 3,114 Units, with an average global market price of around 38.65 K US\$/Units. Production capacity reached 4,000 Units, with a gross profit margin of approximately 40%.

The global foundry industry is facing increasing pressure to achieve complex structures, lightweight designs, and shorter delivery cycles, prompting factories to seek digital modeling methods that eliminate the need for molds. ExOne, in its technical documentation for foundry users, explicitly states that sand mold 3D printing can quickly generate complex sand molds and cores directly from CAD files without relying on traditional models and core boxes, significantly reducing development time and lowering labor and mold costs. Companies like voxeljet emphasize that sand mold 3D printing

offers significant advantages in mold costs and delivery times for large castings (tons or more) and small-batch, multi-variety production, enabling its application in sectors such as energy, heavy machinery, pumps and valves, and automotive powertrains.
