According to our (Global Info Research) latest study, the global Sand-based Permeable Brick market size was valued at US\$ 110 million in 2024 and is forecast to a readjusted size of USD 141 million by 2031 with a CAGR of 3.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Sand-based permeable bricks use wind-deposited sand as raw material and have water permeability by destroying the surface tension of water. There are a large number of capillaries in the brick body with pores smaller than the diameter of dust, which can not only permeate water but also play a filtration and purification role. When the service life of the sand-based permeable bricks expires, only a small amount of energy is consumed to turn the old bricks into sand and then make new bricks, which is green and environmentally friendly.
